

Managed Storage and Replication

Secure Storage for Mission Critical Data

Many corporate standards and government regulations require specific data management procedures. Securus can help your business meet these regulations by providing cost effective data storage for mission critical data.

TBi's Managed Storage and Replication services meet today's IT challenges with a fully managed remote backup and storage platform that is fast and secure – from corporate data centres to branch offices to individual remote users and mobile devices.

Support your Business Continuity plans with data replication between multiple sites.

Control your IT cost with flexible storage plans based on compressed data size at our vault.

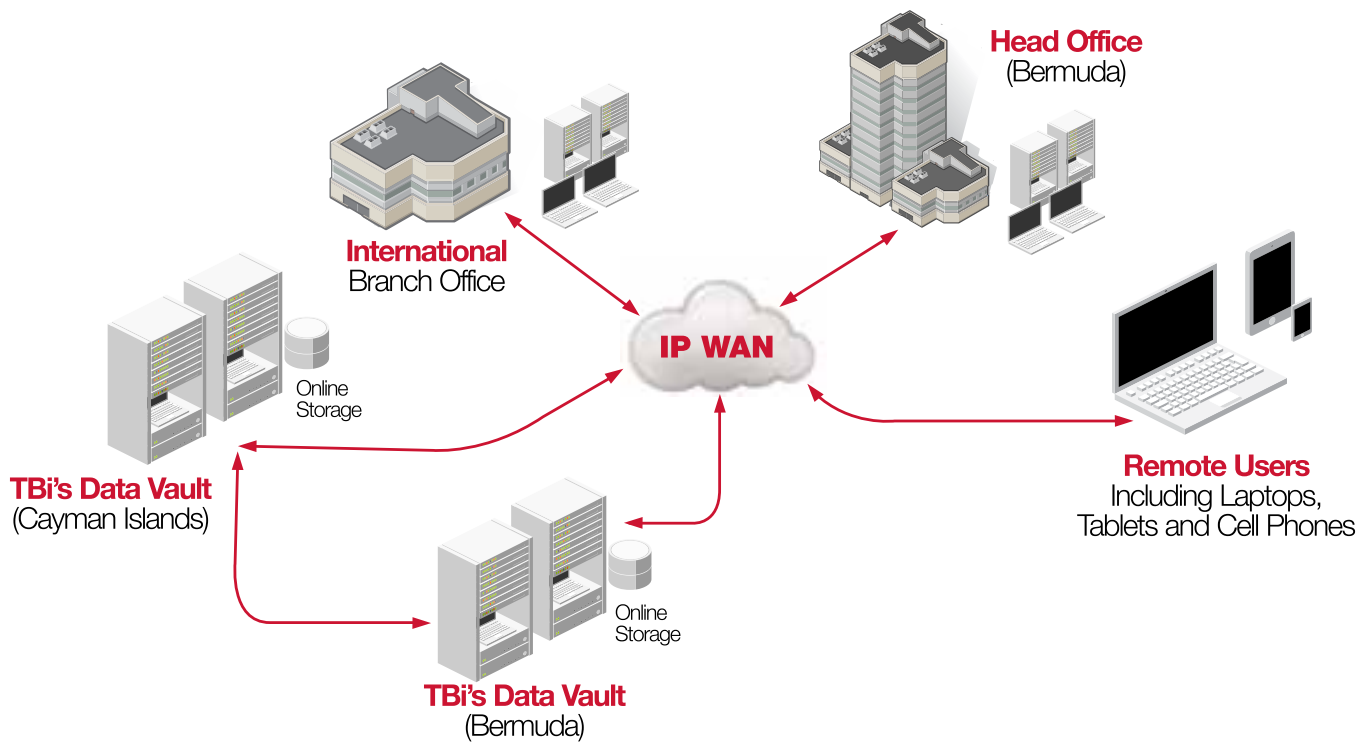

Meet future storage needs – we are constantly analyzing the market and investing in new technology to ensure that our managed storage clients enjoy industry leading storage tools and technology.

Eliminate data loss risks, human error and offsite data latency associated with tapes and tape back ups.

Reduce back up time with de-duplication technology by backing incremental data changes.

Managing corporate data is a key responsibility of every IT department. As a managed storage and replication provider, TBi offers a highly reliable alternative to protect your data companywide – from corporate data centres to branch offices and even individual remote users. Managed enterprise data protection solution gives you the peace of mind that comes with knowing the integrity of your digital assets are maintained.

With Securus your IT department will benefit from:

- **Redundant data vaults in off-shore jurisdictions.** Flexible storage platform options include storage at TBi's vault in St. David's, Bermuda and TBi's affiliate in the Cayman Islands, Telecayman.
- **Security at every point** using 256 BIT AES encryption to secure your data in flight and at rest.
- **Back up and restore made easy.** Fully managed agentless back up and restore infrastructure with all computing systems including VMware ESX and mobile devices including Tablets and Smart phones on Google Android and Apple Operating Systems (iPads, iPhone, etc.).
- **Manage your restore process.** TBi's backup software client enables user initiated restores (including individual exchange mailboxes), and supports continuous data protection.
- **24/7 monitoring and single point of contact for support.** TBi's Managed Storage service is backed by an experienced and fully trained engineering team with comprehensive service level standards and agreements.
- **Bundle** with TBi's Data access and Hosting services for further cost savings.

"We needed a back up solution to comply with our internal Disaster Recovery and Business Continuity plans. We approached TBi with a requirement to have our critical data on-island at TBi's data centre and replicated off-island for DR purposes.

TBi's Securus met our requirements for data protection and back up, and their seamless recovery services was a critical factor in our decision to go with TBi. Furthermore, their operation is supported by unparalleled service level standards and agreements, plus competitively priced."

– A Leading Fund Management Firm in Bermuda
